

Resonant

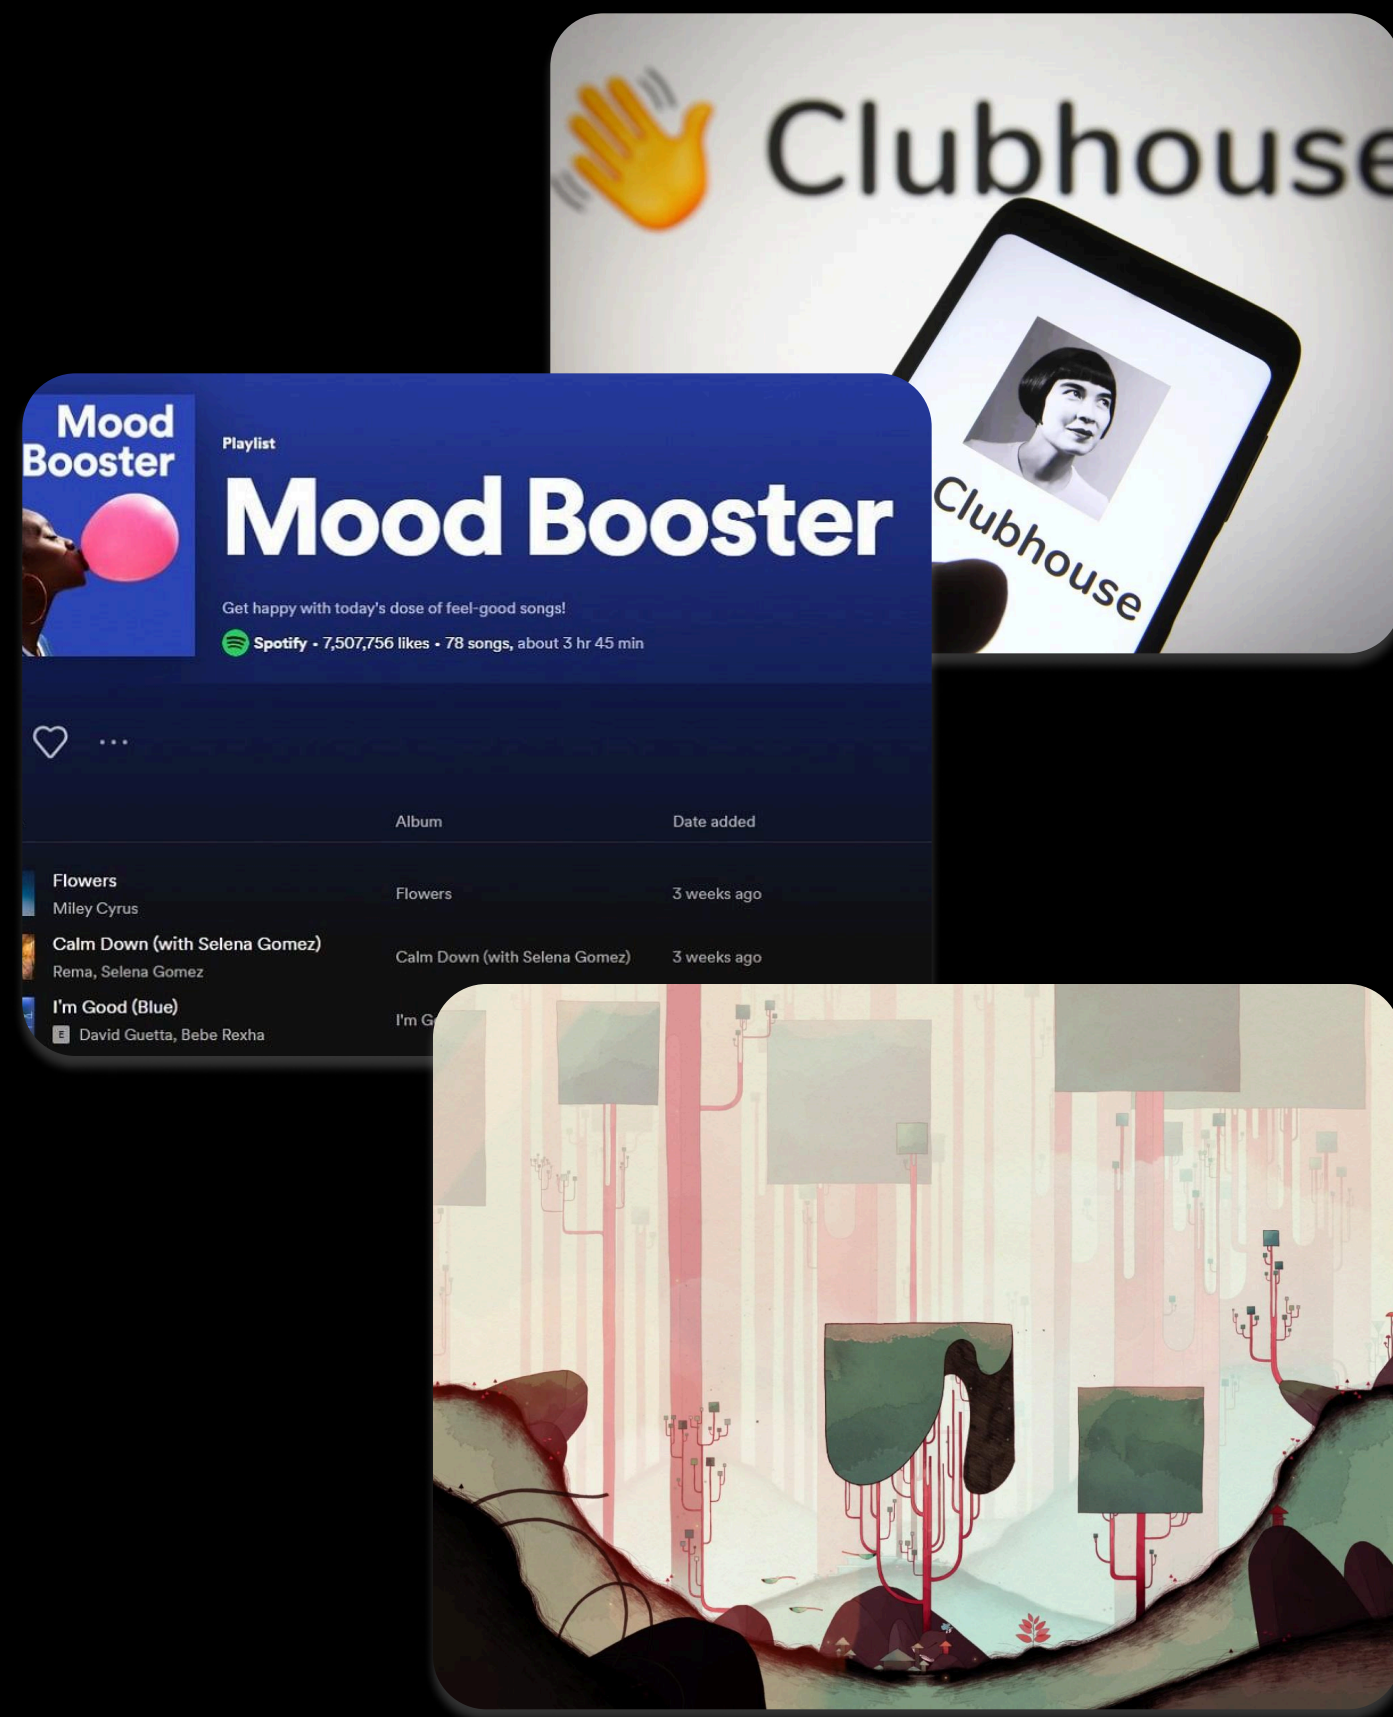

An immersive VR space where sound, color, and emotions resonate together.

Inspiration

Social + Music + Emotions + Colors

Clubhouse (Social Space)

a social audio app

- Shared audio experience for groups of people
- Real-time Audience Interaction
- Social Room

Spotify (Music & Emotions)

a music streaming app

- Mood-based music curation.

Gris (Colors & Emotions)

a platform-adventure game

- Use color to visualize emotions.
- Red → Anger
- Blue → Depression

Design Concept

Resonant Explore The Connection Between Music, Emotions, And Colors.

 **Music sets the mood.**

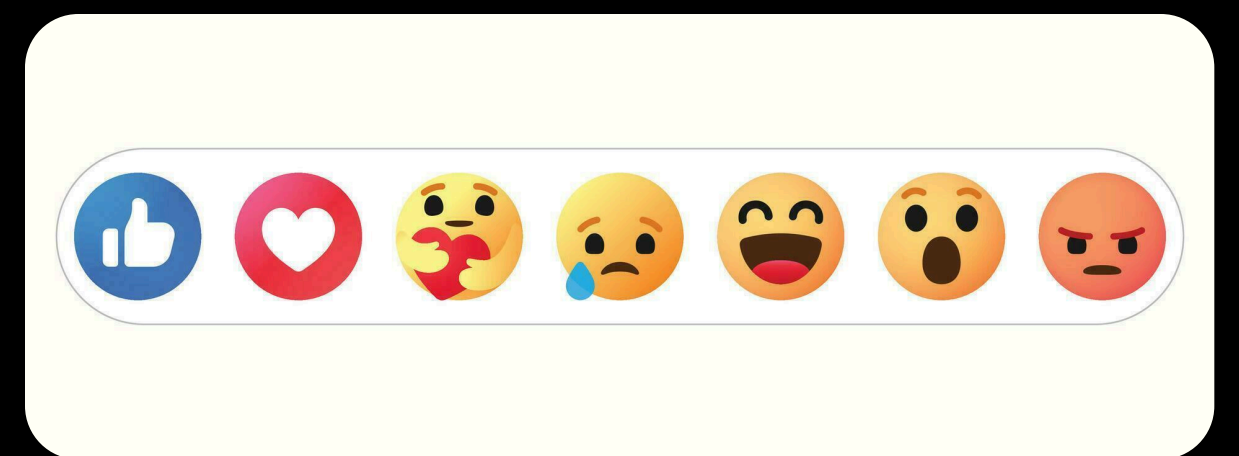

When people listen to music, how do they feel?

- Fast-paced EDM → Feel energetic
- Slow music → Feel peaceful

 **Users express emotions.**

When users feel an emotion, how can they express it?

- Click an emoji

Reaction Emoji on Facebook

Design Concept

Color Visualizes Emotions.

How to share this emotion with other? Colors

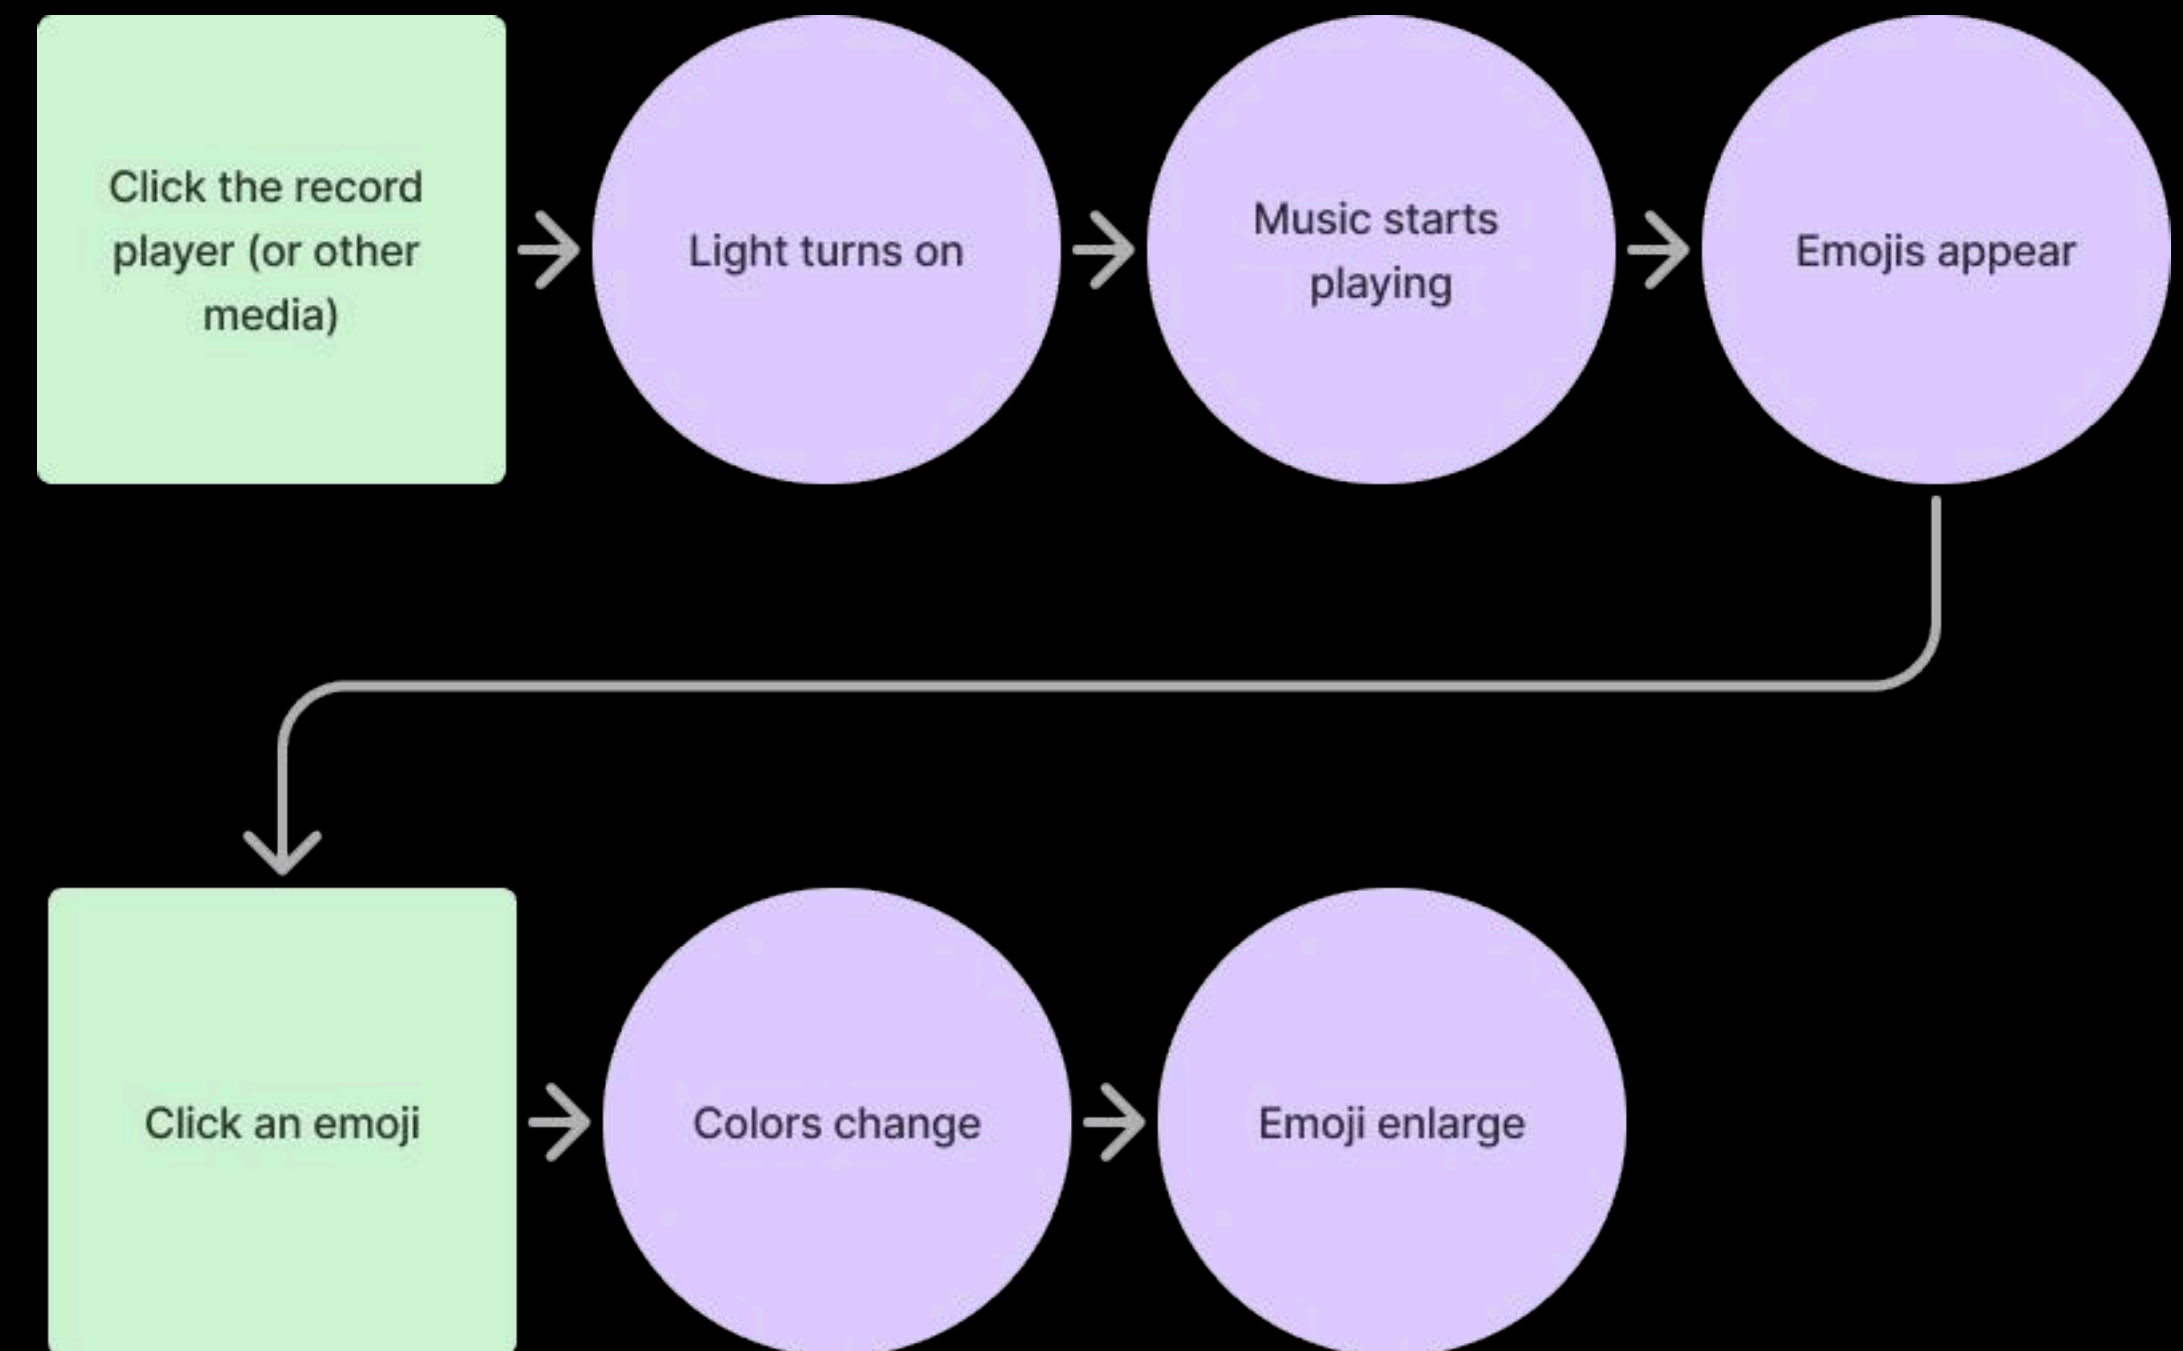

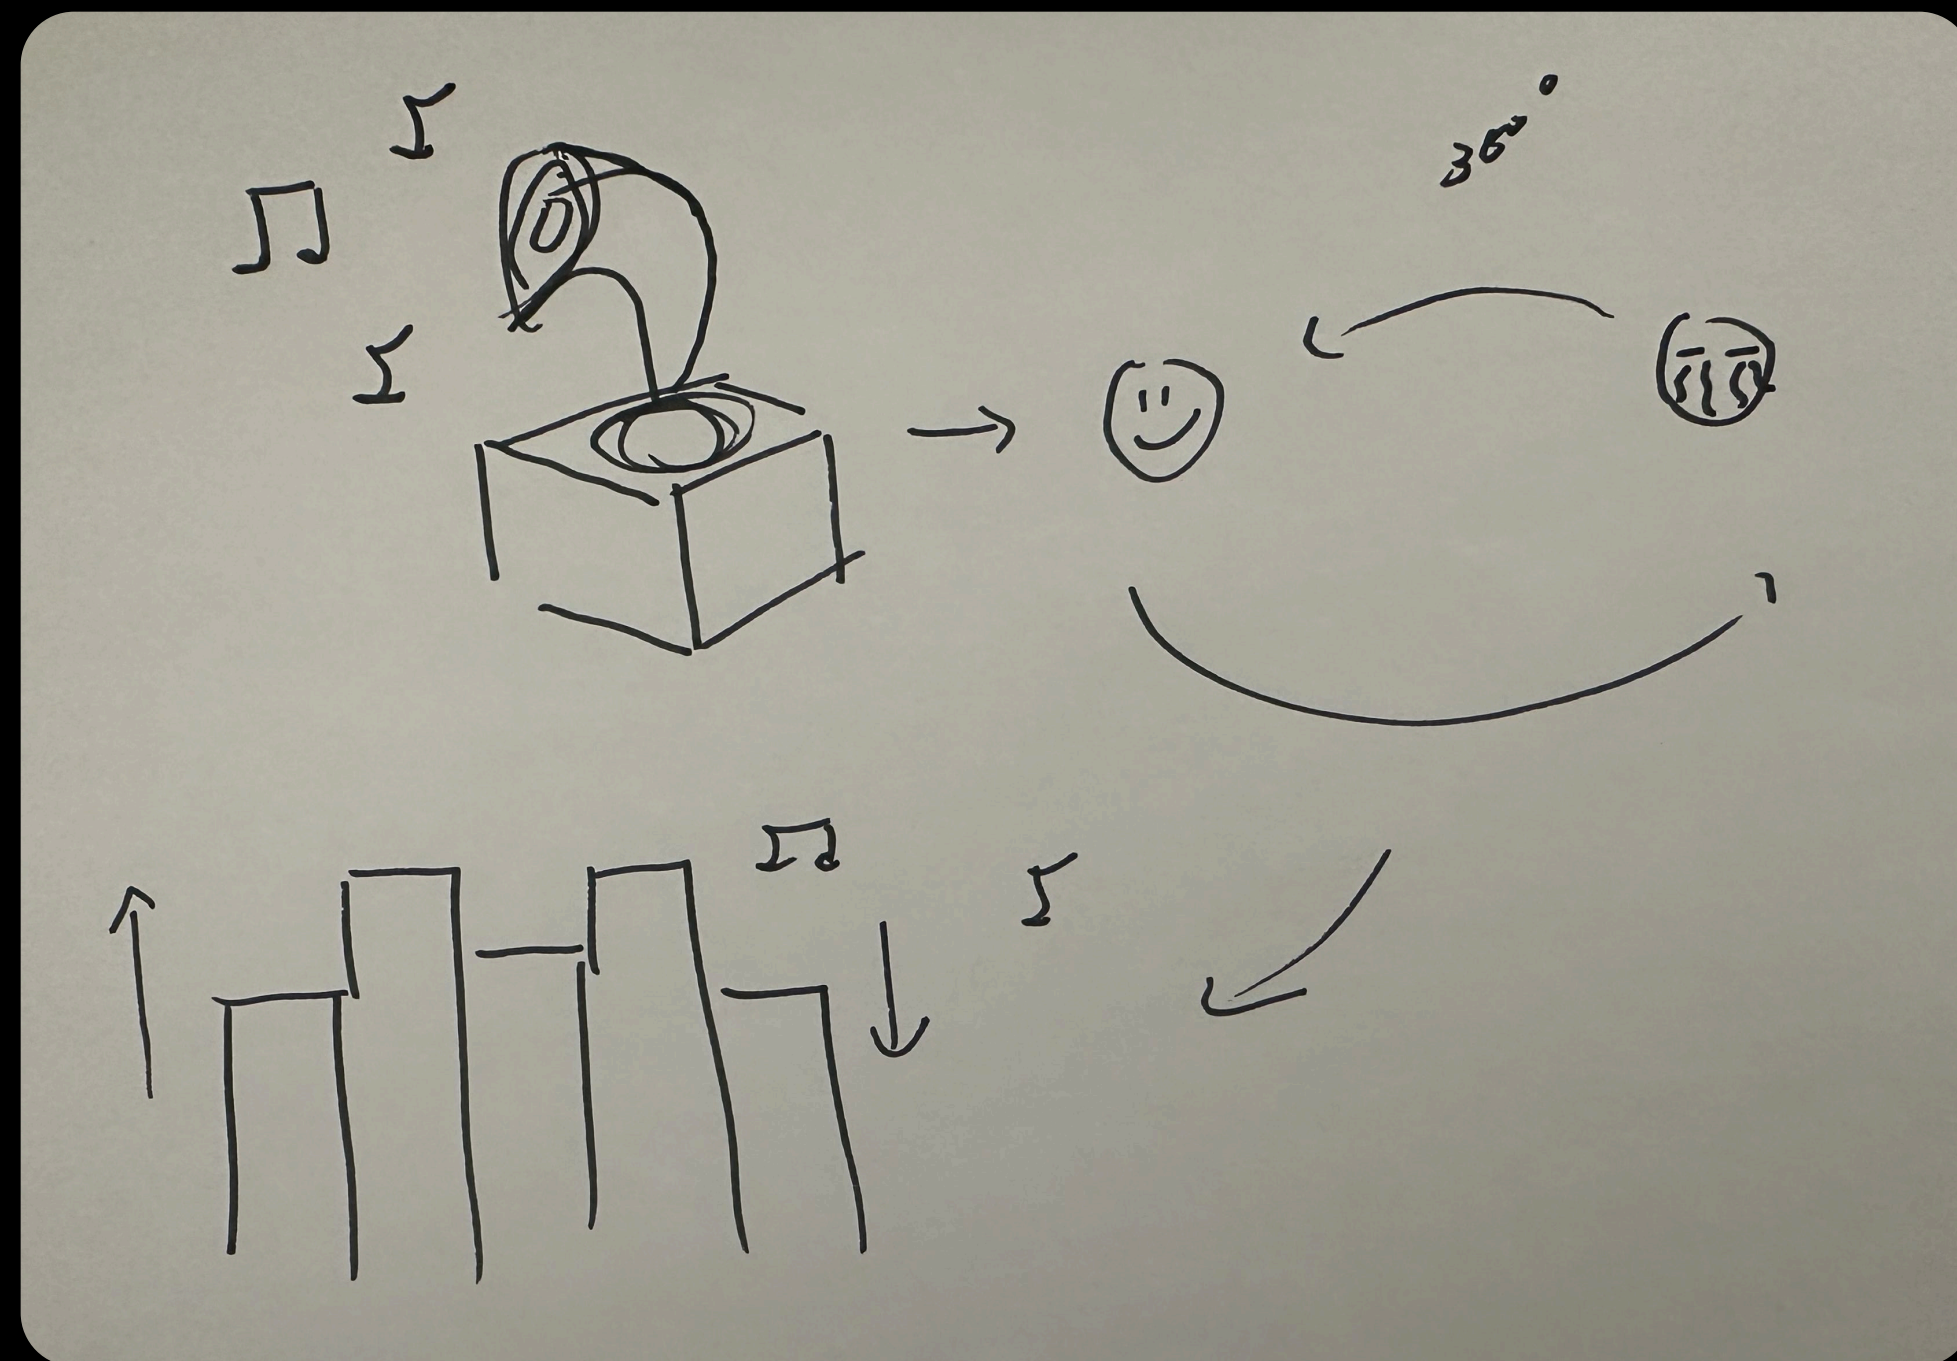

- 😊 happy emoji → 🟡 yellow
- 😎 cool emoji → 🟣 purple
- 😭 sad emoji → 🔵 blue

Create a unique space for their listening experience.

How does the space become unique?

- Colors merge and blend together
- Collective Interaction

Interaction Flow

What did I Change?

Only change color of the walls	→	Include the platform (ground) to make users feel the vibe in space is changing
Emoji enlarge	→	Add sound after clicking on an emoji to provide feedback
Empty Space	→	Add cubes to enhance spatial depth

What I learn from this?

1. The principles of 2D design still apply to 3D experience design (e.g., identifiers, feedback, etc.).
2. Compared to 2D, 3D design includes additional elements such as sound, light, and spatial depth.
3. It's always important to consider the camera.
